Documentation

1. Installing the template

To install the template just unzip the file and upload the folder "genta-coming-soon" (or the single files) on your server.

2. Setting up the countdown timer

Open the "scripts.js" file (assets/js/scripts.js) with a text editor and find the "countdown initializer" piece of code (in the beginning of the file, it's commented).

Find the line: var countTo = 15 * 24 * 60 * 60 * 1000 + now.valueOf();

Set the date you want in the format "YYYY/MM/DD", for example:

var countTo = "2013/04/18";

3. Setting up the progress bar

Open the "index.html" file and find this piece of code:

<div class="progress">

```
<div class="bar" style="width: 0%;" data-percentage="52">
    <div>52%</div>
  </div>
</div>
```

Change the percentage to what you want. Just don't change the "width: 0%;".

4. Changing the backgrounds

The backgrounds are located in "assets/img/backgrounds". Upload in this folder all the backgrounds you want and then open the "supersized-init.js" file (assets/js/supersized-init.js).

Find this code:

```
slides    : [   // Slideshow Images

        {image : 'assets/img/backgrounds/1.jpg'},

        {image : 'assets/img/backgrounds/2.jpg'},

        {image : 'assets/img/backgrounds/3.jpg'},

        {image : 'assets/img/backgrounds/4.jpg'}

        ]
```

Set your backgrounds' file names.

From this file you can also set the type of background animation, the animation speed and other variables. It's commented so you will not make mistakes.

5. Setting up the Twitter feed

In the "scripts.js" file find the "Show latest tweets" piece of code. Find the line:

```
username: "anli_zaimi",
```

Delete "anli_zaimi" and insert your username.

6. Setting up the social icons

With this template are packed 35 social media icons that you can choose from. They are all in PNG and are coded in CSS. So you have to just insert the icon's name that you want to use in the "index.html" file. Open the "index.html" file and find this code:

```
<div class="social-links span2">
  <a class="facebook" href="#"></a>
  <a class="twitter" href="#"></a>
  <a class="dribbble" href="#"></a>
  <a class="pinterest" href="#"></a>
</div>
```

Replace the social media names with the ones you want to use or add others.

7. Setting up the email subscription form

Open the "sendmail.php" file (assets/sendmail.php). From there you can set up the email where you want to receive the notifications when new users subscribe. You can also set up the messages to

display on the page when the user subscribes or when he inserts an invalid email address. It's all commented so you can't make mistakes.

Note:

The subscription form just sends an email (with the address of the new subscriber) when a new user subscribes. The form can also be integrated with services like MailChimp, Aweber, etc. I haven't integrated it because there are so much services like this out there and I didn't know what to choose. But if I receive some requests for a specific service, I may integrate it in the future versions. So, if you want to suggest me a particular service, feel free to send me an email.

8. Changing the favicon and apple touch icons

You can find the favicon and apple touch icons in the "ico" folder (assets/ico). Just replace them with the icons you want.

9. Other settings

The plugins used in this template come with a lot of other settings. If you want to use these settings or you need other documentation, you can find all the plugins' homepage links in the "Attributions.txt" file (attributions/Attributions.txt).

If you want to customize the graphic of this template, in the "psd" folder there are two photoshop psd files that you can use, one for the template and one for the social icons.

How to contact me?

For every question, information or suggestion here are some useful links you can use to contact me:
